

# GROWS

## Moving towards a Green tRansitiOn through sustainable Waste management education in the VET Sector

### GROWS Forum Now Live

*A space for sharing and inspiration*

We are excited to announce the launch of the brand-new **GROWS Forum** on our website: [www.projectgrows.eu](http://www.projectgrows.eu)

The Forum is designed as a collaborative space for VET schools, training centres, and organisations committed to sustainable waste management. Here you can:

-  Share your **Green Action Plans** and inspire others;
-  Exchange **good practices** that have worked in your school or organisation;
-  Post useful **tools, activities, or resources** that promote a greener future.

By connecting directly with peers across Europe, the Forum will become a hub of practical ideas and solutions. Whether you are a teacher, learner, or policy-maker, your contribution matters. Together we can make waste management education more impactful and empower learners to become true agents of change.

 Join the conversation now and be part of our GROWing community!

## GROWS Final Conference in Warsaw and National Workshops

*Save the Date!*

In October and November the GROWS project will host **five National workshops** across Cyprus, Greece, Italy, Portugal, and Bulgaria, bringing together VET providers, trainers, policymakers,

NGOs, and learners to explore sustainable waste management and green skills in education. The workshops will showcase the project's key results - GROWS Toolkit, e-learning platform, and Training Programme, and will encourage discussion and networking among participants. The project will culminate with the **Final Conference in Warsaw on 19 November 2025 at the University of Social Sciences**, where experts and stakeholders will join a public debate on sustainable waste management.

Registration for both national workshops and the final conference is open - to sign up, please contact your national project partner directly via the [contact details available here](#).

## New Social Media Campaign: Join the Green Conversation!

This autumn, the GROWS partners are rolling out a joint **Social Media Campaign** to raise awareness about sustainable waste management and green skills. Running from mid-September to December 2025, the campaign will feature themed posts every two weeks, each led by a different partner.

Some of the upcoming topics include:

- Why waste matters in the **European Green Deal**
- How schools are creating **Green Education Action Plans**
- The challenge of **e-waste** in the digital transition
- Learners as **agents of change** in their communities

The campaign will be hosted on the [GROWS Facebook page](#) and amplified through partners' own networks. Expect our posts with practical tips, inspiring stories, and calls to action.

Let's turn awareness into action and build a greener future together!
